VENDEE (85)	12	07/11	07/12

The department of Ille-et-Vilaine (35) regained its free status on 7 November 2022. There are no longer any active outbreaks on poultry farms in this department. However, the restriction zones resulting from the outbreaks in Côtes-d'Armor (22) and Mayenne (53) notified this week affect part of the territory of this department.

Concerning the departments of Meuse (55), Ille-et-Vilaine (35), Somme (80) and Morbihan (56), the DG for Food is in the process of finalising the study of the surveillance data in order to lift the restricted zones in the near future, which will allow these departments to regain their free status in the absence of a new outbreak.

09/11: confirmation of a 3rd outbreak in Côtes-d'Armor (22) in a farm of 39,000 laying hens in the municipality of: SAINT JUVAT

Sanitary measures, zoning

As for all outbreaks, as soon as the suspicion was raised, sanitary management measures were triggered within the EU regulatory implemented zoning (3 km Protection Zone "ZP" and 10 km Surveillance Zone "ZS" around the farm): culling of poultry on affected farms (either as a preventive measure or at the latest the day after NRL confirmation), reinforcement of biosecurity measures, census of farms and ban on poultry movements.

Raising the risk level

The level of risk with regard to HPAI has been raised from "moderate" to "high" (*ministerial decree of 8 November 2022*), which will lead to the compulsory confinement of poultry by their keepers as of 11 November 2022 throughout metropolitan France.
